

PROJECT

SPOTLIGHT

American Structurepoint is committed to improving quality of life for the communities we serve. In conjunction with the Ohio Department of Transportation (ODOT), our construction inspection team is helping improve safety and lessen traffic congestion in downtown Columbus, Ohio.

Phase 4R/6R of the Downtown Ramp Up project includes upgrades to the ramps between Interstate 70 and Interstate 71 as a way to improve traffic flow and safety through a congested downtown area. The upgrades and renovations will eliminate nearly 70% of lane changes in the area, and three of the state's top ten crash locations will be much safer. Our construction solutions team is providing inspection and construction administration and works hand-in-hand with ODOT to proactively solve complex challenges.

American Structurepoint thrives on this complexity and takes pride in preventing barriers to success. With numerous underground utilities in the area and the importance of allowing traffic to move through downtown, our team draws on a deep well of resources to address issues, identify conflicts, and make certain the project moves forward seamlessly.

When complete, a new gateway will be created to downtown Columbus that will improve safety and reduce congestion in a heavily traveled area. It will also build a new cap over the freeway to improve community connectivity along Front Street between Downtown and the historic Brewery District.

American Structurepoint can be your trusted, long-term partner to improve the quality of life in your community.

AMERICAN STRUCTUREPOINT IS A FULL-SERVICE ARCHITECTURE AND ENGINEERING FIRM.
