

# PROJECT

## SPOTLIGHT

At American Structurepoint, we're committed to enhancing the quality of life for the people and communities we serve through innovative infrastructure solutions. A recent example is in Evansville, Indiana, where our construction solutions team partnered with the Indiana Department of Transportation (INDOT) to improve travel safety and efficiency on two key projects.

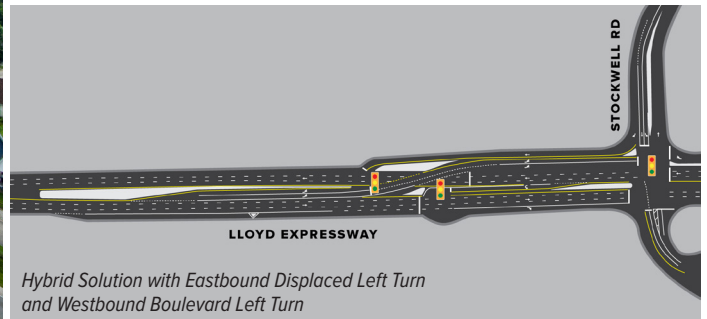

Our construction inspection team is helping upgrade four intersections along one of Evansville's busiest corridors to reduce congestion and crashes.

- Stockwell Road and Vann Avenue intersections opened June 18.
- Work continues at Cross Pointe Boulevard and Burkhardt Road through November 2026.
- At Stockwell Road, our construction inspection team verified that INDOT's first hybrid intersection was built to contract specifications, combining a displaced left turn for eastbound expressway traffic and a boulevard left turn for westbound expressway traffic.

- These improvements guide drivers through left turns in two stages, which improves traffic flow and safety.
- Our team collaborated with INDOT and the contractor to solve a work site challenge.
- After observing recurring traffic congestion at Stockwell Road, our team helped revise the maintenance-of-traffic plan by adding a second left-turn lane to significantly improve traffic flow.

Along a 1.5-mile stretch in central Evansville, upgrades include:  
New pavement

- Traffic signal improvements
- Storm sewer, curb, and sidewalk installations
- During construction, our inspectors recommended and helped implement cement stabilization to improve the soil strength underneath the new pavement. This solution saved INDOT approximately \$1 million in construction costs.
