ARCHITECTURE + INTERIORS

# Our Architecture + Interiors Group positively shapes lives while enhancing the built environment.

With creative drive, we collaborate throughout the design process to reveal spaces that reflect the spirit of our clients and personality of all users. American Structurepoint's Architecture + Interiors Group consists of registered healthcare architects, interior designers, and graphic designers with diverse backgrounds and inspiring individual design achievements. Every year, the American Institute of Architects recognizes emerging talent through the AIA Young Architects Award, and our staff earned this award for the past three consecutive years. This remarkable achievement demonstrates the exceptional leadership and significant contributions our staff have made to the architecture profession.

# **We use evidence-based design to advance healthcare environments for complete patient wellness.**

American Structurepoint's architects and medical planners provide services across the continuum of healthcare, including acute care, outpatient care, and residential care. Our project approach is founded on client engagement, and our process serves the singular goal of creating the best possible design and planning solution that meets the client's functional, budgetary, and schedule requirements while embodying the unique character of its occupants and respecting its context. We rely on a process driven by strong and clear priorities developed while actively listening to our clients. These priorities then inform all of our decisions, acting as guiding principles for the project.

Where possible, we encourage the use of a dedicated workroom where all of our project-related meetings can be held. If large enough, we also prefer to construct full-scale mockups of the most repetitive rooms associated with the project. Again, this process facilitates communication and raises the level of client engagement. The dividend paid through this process is the elimination of surprises that multiply quickly in highly repetitive spaces such as exam rooms and patient rooms.

Client engagement continues across the design development and construction document phases because that is where the design process continues to evolve through detailing, finish selection, equipment integration, and the multitude of other applications that make a building become a reality. In the end, our goal is to hear our clients say their expectations were exceeded with no surprises. An equally important client goal is that the building not only functions efficiently but also represents who they are as an organization.

# HEALTHCARE TEAM

Our team of professionals has years of experience in healthcare building design, planning, and design-oriented research.

**ROB SCHOECK AIA, NCARB**  
**HEALTHCARE PRACTICE LEADER**

Rob oversees the design and production of all healthcare projects and serves as a mentor to staff members. A recognized industry thought leader with over 40 years of experience, his capabilities extend across the full spectrum of healthcare architecture, including planning, design, site development, and master planning. Above all, Rob is a builder of high-performance teams and enduring client relationships. A charismatic and focused leader, Rob's goal is to exceed client expectations by solving challenging problems and arriving at functional solutions with appropriate attention to aesthetics. He will use his expertise to help clients transform strong concepts into superb healthcare facilities.

**VANESSA SHUMATE AIA, LEED AP, NCARB**  
**SENIOR PROJECT ARCHITECT**  
**RESIDENTIAL CARE DESIGN SPECIALIST**

As a senior project architect, Vanessa works with clients to develop a project from inception throughout design and into construction. As the residential care leader, Vanessa's primary focus is on residential care facilities throughout the U.S. with several also being in the Indianapolis area. Vanessa works closely with clients to develop facilities that are consistent with patient-centered care models with varying degrees of acuity. Each facility is designed to respond to the specific location of the facility and the functional needs of the staff.

**JOE REBBER RA, NCARB**  
**SENIOR PROJECT MANAGER**

An award-winning architect, Joe brings over 40 years of design and project management excellence to American Structurepoint. His passion for architecture rests in designing a building that not only exceeds client expectations, but works in every aspect, including design, detailing, and lack of errors. His diverse healthcare portfolio includes ambulatory surgery centers, medical office buildings, surgical and outpatient care centers, cardiac and vascular care, imaging, emergency rooms, sleep centers, and more. Joe will use his expertise to help you meet any challenge and deliver outstanding yet cost-effective healthcare solutions.
