

FLAT-FEE RESIDENTIAL ROOFING ASSESSMENTS

INVESTIGATIVE SERVICES

American Structurepoint offers a flat-fee service to assess residential asphalt shingle roofs for hail and/or wind damage in consideration of the relative exposure created by these incidents. This service is performed with the same level of detailed, professional engineering judgement that comes with all of our forensic evaluations, now for a reliable low price of \$1,050.

Our evaluation of wind and hail-related damage to residential asphalt shingle roofs differentiates between functional and non-functional, storm and non-storm damage, and quantifies the amount of damage on each roof slope. It also includes:

- » **Condensed Report:** Up to 15 captioned photos and 2 to 3 pages of property-specific observations and opinions
- » **One-Hour Round-Trip Travel** from our office locations listed below.

ADDITIONAL DETAILS

- » All one- and two-story, single-family residential structures with no limitations on size, including up to one outbuilding.
- » Assessments conducted by experienced, professional staff. Report sealed by a registered professional engineer.
- » All roof slopes up to 9:12 pitch. Steeper slopes may require additional time or a second inspector for safety considerations.
- » A roof measurement report, hail verification report, and/or wind verification report can be provided by request and will be billed at cost.

Call **855.822.1966** or visit **www.structurepoint.com/investigative**

Certain restrictions apply, including attorney/contractor/public adjuster involvement or findings of intentional mechanical damage. Client will be notified as soon as these conditions dictate the waiver of flat-fee pricing. Additional services and travel time will be invoiced at our standard hourly and mileage rates.
