

SPOTLIGHTING OUR PEOPLE

UTILITY INFRASTRUCTURE

With each American using an average of 82 gallons of water per day, having an expansive and reliable water and sanitary system is critical to our quality of life. American Structurepoint's Utility Infrastructure (UI) group partners with communities across the country to provide safe drinking water, treat wastewater, and manage stormwater.

American Structurepoint's UI engineers thrive on complexity. We untangled the labyrinths of urban utility networks to make way for transformational developments, like the 16 Tech Innovation District in Indianapolis, which included relocating 20- and 30-inch diameter water mains critical to serving the entire downtown area.

Our team uses innovative treatment processes allowing communities like Norwalk, Ohio, to upgrade their wastewater treatment plant within a very tight footprint to meet current and future demands - all while preventing pollution of local waterways and positioning the community for economic growth.

Our services are expanding, which allows us to offer more solutions to our clients and growth potential for our people.

With a commitment to professional development, a culture of learning, and a strong sense of community service, American Structurepoint's utility infrastructure team is a great place to start and grow your career.

AMERICAN STRUCTUREPOINT IS A FULL-SERVICE ARCHITECTURE AND ENGINEERING FIRM.
