

PROJECT

SPOTLIGHT

Improving the quality of life isn't just about what we design, it's about taking time to understand feedback from the communities we serve and develop solutions together. Meaningful public involvement builds trust, and at American Structurepoint, we encourage our clients to solve complex issues with us. Our innovative professionals are able to handle complex projects better than anyone because we take time to understand the needs of our clients and then draw upon our deep well of resources to solve them.

One recent example of this is in Bonita Springs, Florida, where American Structurepoint is developing solutions to provide flood relief. Our team has been meeting with Bonita Springs residents to discuss various options to reduce flood risk in the **Quinn/Downs/Dean neighborhood**, which is prone to extreme flooding events.

By meeting with Bonita Springs residents, our team explained the risks of living in a floodplain, showed various design alternatives, and outlined different options to reduce flooding. Meaningful public involvement like this builds trust, enhances communication, and leads to better outcomes.

Now that we have gained insights from the community, our team will design the infrastructure that will reduce the impacts and damage caused by the continual flooding of the area. We appreciate the opportunity to solve complex issues in Florida and partner with the community to enhance their quality of life.

AMERICAN STRUCTUREPOINT IS A FULL-SERVICE ARCHITECTURE AND ENGINEERING FIRM.
