

PROJECT

SPOTLIGHT

American Structurepoint worked with the Community Reinvestment Foundation (CRF) to provide architecture, interior design, and structural engineering services for an affordable senior living community in Whitestown, Indiana.

Glasswater Creek of Whitestown offers assisted and independent living apartments where seniors can enjoy an active lifestyle in a comfortable and inspiring atmosphere.

The American Structurepoint team designed space to personalize the health and wellness of residents and energize residents, family members, and staff. The facility sets the bar for affordable housing in Boone County and creates unique opportunities for residents.

Building amenities include an exercise gym, library/study, theater room, beauty salon, barber shop, social gathering space, restaurant-style dining, putting green, and walking trails.

American Structurepoint improves the quality of life for the people and communities we serve. Our projects help change lives, and we are grateful for the opportunity to help the Community Reinvestment Foundation (CRF) provide a high-quality, affordable senior living option for the Whitestown area.

Using accessible, sustainable, and appealing features, Glasswater Creek is an exciting place to call home for residents.

AMERICAN STRUCTUREPOINT IS A FULL-SERVICE ARCHITECTURE AND ENGINEERING FIRM.
