

# PROJECT

## SPOTLIGHT

American Structurepoint is providing construction inspection services for a portion of the **I-69 Finish Line** project, which consists of upgrading more than 26 miles of State Road 37 to interstate standards from Martinsville in Morgan County to Indianapolis in Marion County. When finished, the upgraded interstate will help traffic flow better and improve safety including removing 14 traffic lights and upgrading the intersections.

American Structurepoint's nine-member construction inspection team, as a subconsultant to The Corradino Group, is working on the section beginning 1 mile north of State Road 44 in Morgan County to Fairview Road in Johnson County. American Structurepoint's certified inspectors are on site to ensure the project is a success and that construction occurs as planned, on time, and on budget, while also meeting all standards established by the Indiana Department of Transportation (INDOT).

We are making tremendous strides on this project. Just last month, we reached another milestone when a massive amount of concrete was poured for the future SR 144 bridge over I-69 in Johnson County. This milestone was extraordinary due to the width of the bridge deck (approximately 90 feet) and a concrete median curb on the bridge. Crews worked all night to complete this unique bridge pour using two machines.

When the entire project is completed in 2024, vehicles will be able to travel all the way on I-69 from the Canadian border at Port Huron, Michigan, to Evansville, Indiana.

American Structurepoint defines the standard of excellence for people across the world who want help building and bettering their community. What we do with our clients improve lives. We are grateful for the opportunity to improve this corridor to move traffic more safely and efficiently.

AMERICAN STRUCTUREPOINT IS A FULL-SERVICE ARCHITECTURE AND ENGINEERING FIRM.
